

Praktikum: Maschinelles Lernen

Fahrzeugsteuerung mittels Deep Q-Learning

André Bauer, Fabian Dürr, Jonathan Härtl, Xiaoli Ma, Kun Nie 13. Sept 2016

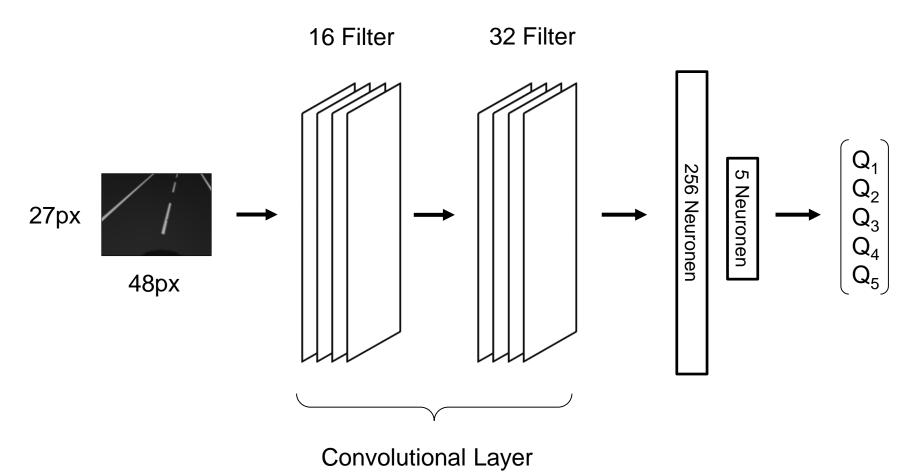

Grundlegende Idee

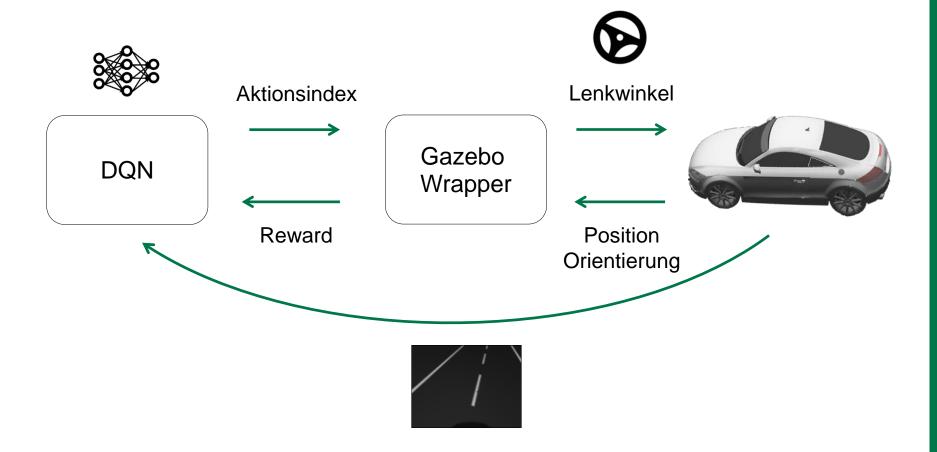

Neuronales Netz

Kommunikation

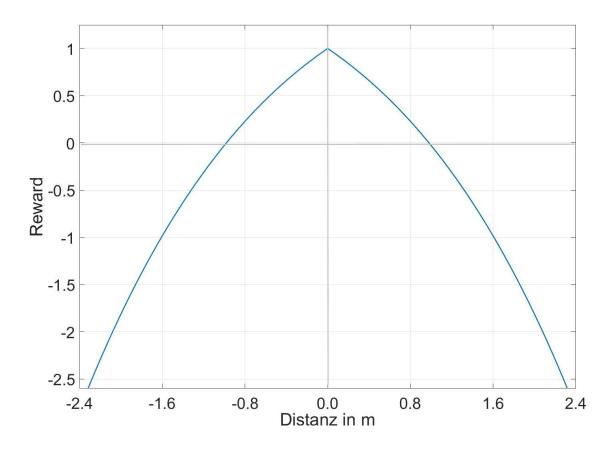

Distanzbewertung

Trainingsparameter

- Neuronales Netz
 - Initiale Lernrate: 10⁻⁵
 - Feste Schrittweite 2 Mio. Iterationen
 - Gamma: 0.1
- Q-Learning
 - Exploration: 2-4 Mio. Iterationen
 - Replay Memory: 500k
- Trainingsvolumen
 - 3-4 Mio. Iterationen pro Tag

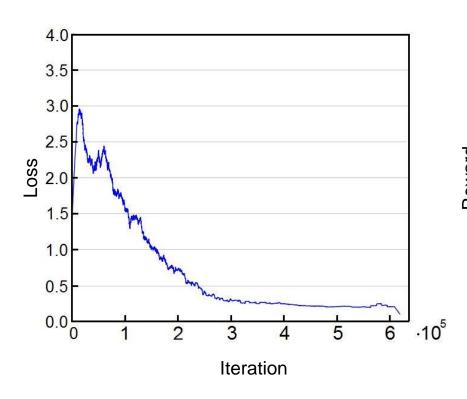

Ergebnisse

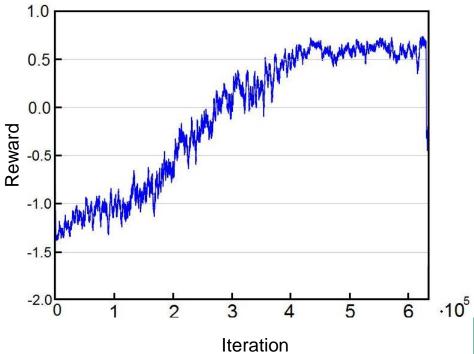

Ergebnisse

Fazit

- Erfolgreiches Training in Simulation
- Feintuning der Rewardfunktion zeitintensiv
- Schwer auf reale Anwendungen übertragbar

Ausblick

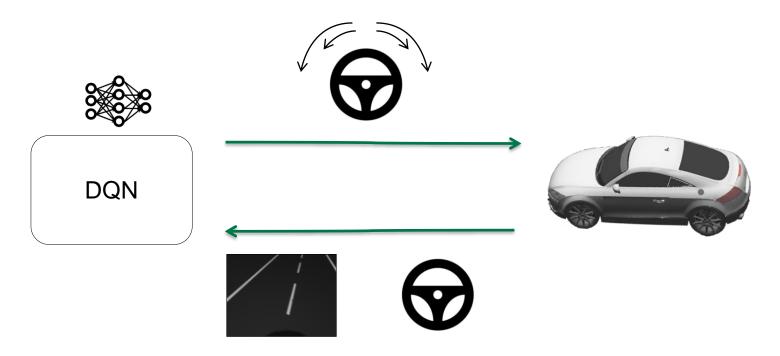

Hindernisse

Ausblick

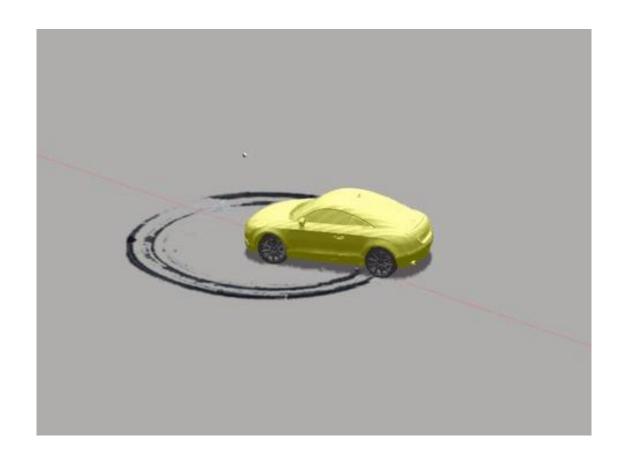

Lenkwinkeldeltas als Aktionen

Aktueller Lenkwinkel
